

MINIMAX Algorithm

Python Code:

```
def minimax(depth, nodeIndex, isMax, scores, h):  
    if depth == h:  
        return scores[nodeIndex]  
  
    if isMax:  
        return max(minimax(depth + 1, nodeIndex * 2, False, scores, h),  
                    minimax(depth + 1, nodeIndex * 2 + 1, False, scores, h))  
    else:  
        return min(minimax(depth + 1, nodeIndex * 2, True, scores, h),  
                    minimax(depth + 1, nodeIndex * 2 + 1, True, scores, h))  
  
scores = [3, 5, 6, 9, 1, 2, 0, -1]  
h = 3  
  
print("Optimal value:", minimax(0, 0, True, scores, h))
```

Output:

The screenshot shows a JupyterLab window with the following interface elements:

- Top bar: "jupyter" logo, "EXP 3 Last Checkpoint: 5 minutes ago", and a "Trusted" status indicator.
- Menu bar: File, Edit, View, Run, Kernel, Settings, Help.
- Toolbar: Icons for file operations (save, open, copy, paste, delete) and execution (run, step through, interrupt).
- Code cell: A Python code cell labeled "[1]:" containing the minimax algorithm code. The code is syntax-highlighted with green for keywords and blue for strings.
- Output: The output of the code cell is "Optimal value: 5".
- Bottom bar: A prompt "[]:" for the next input.
